Professional Summary:

Software Engineer experienced in building and modernizing enterprise web applications, internal tools, and API integrations using Java, TypeScript, SQL, and Angular.

Professional Skills:

- **Languages:** Java, TypeScript, JavaScript (ES6+), Python, Ruby, PHP, SOQL
- **Frontend:** Angular, React, Redux, React Native, Bootstrap, HTML5, CSS3, Responsive Design
- **Backend & APIs:** REST APIs, API Integration, Apache Maven, Struts2, Ruby on Rails, Laravel, Authentication Workflows, Jira Automation
- **Databases:** MySQL, PostgreSQL, IBM Db2, SQL Query Optimization, Data Reporting, Data Visualization
- **Tools & Platforms:** Git, GitHub, GitLab, Windows, Linux, Jira, Salesforce, Jaspersoft
- **Engineering Practices:** Full-Stack Development, Legacy System Modernization, Workflow Automation, Debugging, Performance Optimization, Agile Development

Professional Experience:

IMS Integration | Software Developer

01/2023 – 02/2026

- Incrementally migrated legacy Struts2 UI workflows into modular Angular-based frontend architecture while maintaining compatibility with existing Java backend services and REST API integrations.
- Led third-party IDology identity verification iFrame and API integration within onboarding workflows, improving fraud prevention, reducing friction, and increasing onboarding completion rates across web-based applications.
- Diagnosed onboarding failures by analyzing frontend UX behavior, image capture quality, third-party verification edge cases, and API response patterns, **improving identity verification pass rates by ~20%**.
- Partnered directly with business stakeholders, translating business and client requirements into technical solutions, backend processes, reporting functionality, and system integrations for financial institution platforms.
- Developed internal automation tools and data-processing systems using Java, Python, SOQL, and API integrations, **eliminating 100+ annual manual support hours** and improving operational efficiency.
- Designed and maintained financial reporting and data visualization systems supporting **100+ financial institutions** and **processing millions of documents monthly** across internal services and third-party platforms, including Corelation and Symitar.
- Developed workflow automation and systems integration solutions between Jira and Salesforce to improve ticket routing accuracy, status synchronization, and operational visibility across support and onboarding processes.

Smarttwigs | Software Engineer Intern (Remote)

02/2022 – 01/2023

- Developed responsive UI components using React, React Native, and Redux, improving frontend load performance and user interaction responsiveness.
- Integrated analytics and behavioral tracking systems, improving data accuracy and enabling more informed product and business decisions.
- Owned the Stripe implementation for the mobile workflow utilizing React Native.

Education:

B.S. Computer Science, Summa Cum Laude | Colorado Technical University | 2023
