Professional Summary:

Software Engineer with 4+ years of experience designing, modernizing, and optimizing secure full-stack enterprise applications across FinTech and SaaS environments. Proven track record building scalable APIs, workflow automation tools, data reporting systems, and frontend modernization initiatives using Java, TypeScript, SQL, and modern web technologies. Combines strong software architecture fundamentals with performance optimization, security compliance, and cross-functional problem solving.

Professional Skills:

- **Languages:** Java, TypeScript, JavaScript (ES6+), Python, Ruby, PHP, SOQL
- **Frontend:** React, Redux, React Native, HTML5, CSS3, Bootstrap, AngularJS
- **Backend / Frameworks:** REST APIs, Apache Maven, Struts2, Ruby on Rails, Laravel
- **Databases:** MySQL, PostgreSQL, IBM Db2, SQL Query Optimization
- **Tools & Platforms:** Git (GitHub/GitLab), Linux, Jira, Salesforce, Jaspersoft
- **Development Practices:** Full-Stack Development, API Integration, Workflow Automation, UI Modernization, Agile Collaboration

Professional Experience:

IMS Integration | Software Developer

01/2023 – 02/2026

- Led IDology identity verification iFrame integration, improving fraud prevention and onboarding completion rates while reducing user friction in identity verification workflows.
- **Improved identity verification pass rates 20%** by diagnosing technical UX friction points (camera quality, scan confidence, environmental variables) and collaborating cross-functionally to optimize onboarding workflows.
- Partnered directly with business stakeholders and financial clients to translate requirements into technical solutions, ensuring alignment between engineering systems and real-world operational needs.
- Modernized monolithic Struts2 systems into maintainable frontend architecture while improving backend API scalability and performance.
- Engineered internal automation solutions using Java, Python, and SOQL integrations that eliminated **100+ annual manual support hours** and increased operational efficiency.
- Designed financial reporting and data visualization systems supporting **100+ financial institutions**, processing **millions of documents annually** across internal and third-party platforms, including Corelation and Symitar.
- Executed security-critical DevOps and systems integration initiatives under CTO leadership, including Jira/Salesforce automation and third-party compliance upgrades for identity and geolocation services.

Smarttwigs | Software Engineer Intern (Remote)

02/2022 – 01/2023

- Developed responsive UI components using React, React Native, and Redux, **contributing to a 40% improvement in page load speed** and stronger user interaction performance.
- Integrated analytics and behavioral tracking systems, improving data accuracy and enabling more informed product and business decisions.
- Refactored legacy application components using MVC and RESTful design principles, improving maintainability, scalability, and engineering best practices

Education:

B.S. Computer Science, Summa Cum Laude | Colorado Technical University | 2023
