Education:

B.S. Computer Science - Colorado Technical University - Graduated: 2023

Professional Experience:

IMS Integration (Remote)
Software Developer 01/2023 – 02/2026

- Developed Java backend logic and MySQL operations for credit-union loan extensions and deferments, translating financial business requirements into data-driven eligibility decisions using member information.
- Reduced infrastructure operational risks by scripting Python and Bash workflows to automate SSL certificate lifecycles across 150+ clients, safeguarding production systems against human error and expensive downtime caused by missing, expired, or invalid SSL certificates.
- Developed reusable Python tools for multi-stage SQL data extraction and built a Jira-to-Salesforce pipeline, preventing data drift and stale record overwrites through automated timestamp verification.
- Migrated legacy Struts2 backend functionality into Spring Boot services for use in an AWS-hosted environment (EC2, S3, ECS, ECR), supporting a broader application modernization project with an Angular front end, while expanding automated backend/API and frontend test coverage within existing CI/CD workflows.
- Supported and enhanced a high-volume credit union statement processing system by configuring client-specific workflows, resolving processing errors, and developing REST API endpoints to enable flexible email notification routing to teams and backup personnel (Java, MySQL, IBM Db2)

Smarttwigs (Remote)
Junior Software Developer 02/2021 – 01/2023

- Tested React and React Native application workflows on Android across UI states, API interactions, validation rules, page loading, formatting, and failure conditions; investigated issues affecting reliability and usability.
- Developed and validated donation and payment workflows integrated with Stripe, testing authentication, transaction validation, error handling, and failure scenarios.
- Created PHP REST API endpoints and a PostgreSQL view that returned only the profile fields needed for social-platform functionality; investigated joins, indexing, and application/database interactions during troubleshooting.

Technical Skills:

- **Programming Languages:** Java, Python, TypeScript, JavaScript, HTML, CSS, PHP, Ruby
- **API & Data:** REST APIs, SQL, MySQL, PostgreSQL, IBM Db2, data verification
- **Frameworks:** Angular, Struts2, React, React Native, Laravel, Spring Boot, Ruby on Rails
- **Tools:** Jira, Confluence, Salesforce, Git, GitHub, GitLab, CI/CD, Windows, Linux, Docker, AWS, EC2, ECS, ELB, ECR, AWS CLI, AWS SDK
- **Application & support:** Application troubleshooting, workflow configuration, requirements interpretation, testing and validation, issue documentation, client support
